	Retailco experiences disruption due to various factors such as natural disasters, geopolitical tensions and un-expected demand fluctuations. Balancing Inventory levels across multiple channels including brick and mortar stores and online platforms, poses challenges in meeting customer demand while minimizing holding costs and stock-outs.  Increasing pressure to adopt sustainable practices throughout the supply chain, from sourcing raw-materials to end-of-life disposal, presents both opportunities and challenges for Retailco.  Ensuring timely and efficient lastmile delivery is critical for customer satisfaction but it requires overcoming obstacles such as traffic congestion, urbanization and changing customer preferences.
