

Table of Contents

List of Figures	vi
List of Tables	viii
Chapter 1 – Introduction	1
1.1. Wireless Communication – An Introduction	1
1.2. Multiple Access	2
1.2.1. OMA – Orthogonal Multiple Access	2
1.2.2. OFDMA – Orthogonal Frequency Division Multiple Access	3
1.2.3. Non-Orthogonal Multiple Access	3
1.3. OFDM – Orthogonal Frequency Division Multiplexing	4
1.4. Wireless Communication Channel – An Overview	7
1.4.1. Multi-path Spread	7
1.4.2. Types of Fading	8
1.4.3. Rayleigh Fading	9
1.4.4. Doppler Fading	9
1.4.5. Examples of Doppler fading	11
1.5. MIMO	11
1.5.1. Multiple Input/Multiple Output (MIMO) Techniques – An Overview	12
1.5.2. MIMO OFDM – An Introduction	13
1.6. Massive MIMO	14
1.6.1. Channel Estimation in Massive MIMO	16
1.6.2. Pilot Contamination	17
1.6.3. Channel Estimation Techniques	18
1.6.4. Estimation Techniques	19
1.6.5. Minimum Mean Square Estimator (MMSE)	20
1.6.6. Least Square Estimator (LS)	20
1.7. Non – Orthogonal Multiple Access (NOMA)	20
1.7.1. NOMA System Model	21
1.8. Motivation of the Present Work	23

1.9. Research Objectives	24
1.10 Thesis Organization	24
Chapter 2 – Literature Survey	26
2.1 Literature Review	26
2.1.1 Related works on Channel Estimation	27
2.1.2 Review on work related to OFDM-MIMO	27
2.1.2.1 Review on work related to Massive MIMO	30
2.1.2.2 Review on work related to NOMA	31
Chapter 3 – MIMO and Channel Parameter Estimation with its Performance Comparison	32
3.1 Performance Comparison of Conventional and Massive MIMO – An Introduction	32
3.1.1 Implementation Methodology	34
3.1.2 Channel Estimation	35
3.1.2.1 Training Based Channel Estimation	35
3.1.2.2 Blind Channel Estimation	37
3.1.3 Simulation Results for Conventional and Massive MIMO	37
3.1.4 Summary of Conventional and Massive MIMO	40
3.2 Estimation of Compressed Sensing MMSE channels using Conventional LS and MMSE	40
3.2.1 Channel estimation	41
3.2.1.1 Least Square Method	41
3.2.1.2 Minimum Mean Square Error	42
3.2.2 Compressed Sensing with MMSE	42
3.2.3 Simulation Results for LS and MMSE	44
3.2.4 Summary of Conventional LS, MMSE and CS MMSE	46
Chapter 4 – Performance and Implementation of OFDM NOMA using Iterative Algorithm	47
4.1 Performance of Non-Orthogonal Multiple Access in Fading Channels- An Introduction	47

4.1.1 Proposed Design for NOMA	48
4.1.1.1 NOMA for AWGN Fading Channel	49
4.1.1.2 NOMA for Rayleigh Fading Channel	49
4.1.2 NOMA with Error Correcting Block	50
4.1.3 Mathematical Analysis	51
4.1.4 Simulation Results on Fading Channels	52
4.1.4.1 Bit Error Rate Analysis using NOMA	53
4.1.4.2 Results of Error Correcting Block using NOMA	55
4.1.5 Summary on Performance of fading channels in NOMA	56
4.2 Implementation of MIMO OFDM NOMA System – An Introduction	56
4.2.1 Multiple Access Systems	57
4.2.2 Iterative Algorithms for NOMA	59
4.2.3 Iterative Methodology	60
4.2.3.1 Channel Estimation without NOMA	65
4.2.3.2 Channel Estimation with NOMA	66
4.2.4 Simulation Results on NOMA using Iterative Algorithm	67
4.2.5 Summary of Iterative Algorithm on NOMA	69
4.2.6 Iterative Algorithm with MMSE	69
4.2.6.1 FFT based multi beamforming	71
4.2.6.2 The Model of Radix Factorization	71
4.2.7 Simulation Results for Iterative Algorithm with MMSE	71
4.2.8 Summary of Iterative Algorithm with MMSE	77
Chapter 5 – Conclusion	79
Chapter 6 – Scope for Future Work	81
List of Publications	82
Bibliography	84
