

Fifth Semester B.E./B.Tech. Degree Examination, Dec.2024/Jan.2025
Automata Theory and Compiler Design

Time: 3 hrs.

Max. Marks: 100

Note: Answer any FIVE full questions, choosing ONE full question from each module.

Module-1

- 1 a. Define the three basic concepts of Automata. Also construct a DFA that accepts all strings that have the first and last letter different on $\Sigma = \{a, b\}$. Justify the DFA with example. (10 Marks)
- b. Solve by converting the following NFA to DFA. (10 Marks)

OR

- 2 a. Explain the different phases of a compiler with neat block diagram and convert the source code. $\text{Position} = \text{Initial} + \text{rate} * 60$ into target code. (10 Marks)
- b. Solve by Minimizing the following DFA. (10 Marks)

Module-2

- 3 a. Define the formal definition of Regular expression. Also write the regular expression for the following : i) Set of strings consisting of Even numbers of 'a' s followed by odd number of 'b's on $\Sigma = \{a, b\}$.
ii) $L = \{a^n b^m : (n + m) \text{ is even}\}$.
iii) $L = \{a^n b^m : n \geq 4, m \leq 3\}$. Justify the answer. (10 Marks)
- b. Explain Input buffering in Lexical Analyzer. Define Token , Patterns and Lexemes with examples. Also write the tokens for $E = m * c ** 2$. (10 Marks)

OR

- 4 a. Define Regular Definitions. Write the Regular Definitions for 'C' identifiers and unsigned numbers using short hands notations and write the transition diagram. (10 Marks)
- b. State and prove pumping lemma theorem for Regular languages. (10 Marks)

Module-3

- 5 a. Define Context free grammar. Write a CFG for the following :
- To generate strings of palindrome over $\Sigma = \{0, 1\}$.
 - $L = \{a^i b^j \mid i \neq j, i \geq 0 \text{ and } j \geq 0\}$
 - $L = \{0^m 1^m 2^n \mid m \geq 1, n \geq 0\}$. Justify the answer.

Important Note :

1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages.
2. Any revealing of identification, appeal to evaluator and /or equations written eg, $42+8=50$, will be treated as malpractice.

- b. Define Left recursion and left factoring. Also remove the left recursion and left factoring for the Grammar
- $$E \rightarrow E + T \mid T$$
- $$T \rightarrow id \mid id [\] \mid id [X]$$
- $$X \rightarrow E, E \mid E.$$

(10 Marks)

OR

- 6 a. Define Ambiguous grammar. Show that the following is ambiguous.

(10 Marks)

$S \rightarrow i c t s \mid i c t s e s \mid a$
 $G \rightarrow b$ for the string ibtibtaea

- b. Consider the grammar

$$E \rightarrow T E'$$

$$E' \rightarrow + T E' \mid \epsilon$$

$$T \rightarrow F T'$$

$$T' \rightarrow * F T' \mid \epsilon$$

$$F \rightarrow (E) \mid id$$

- i) Compute FIRST and Follow sets.

- ii) Using FIRST and Follow sets construct the Predictive LL (1) parsing table. (10 Marks)

Module-4

- 7 a. Define Non Deterministic Pushdown Automata. Construct an NPDA for the Language $L = \{W \in (a, b)^* : n_a(w) = n_b(w)\}$ and draw the transition diagram. (10 Marks)
- b. Define Handle and Handle Pruning. For the following grammar perform shift reduce for the string $id_1 + id_2 * id_3$.

$$E \rightarrow E + E$$

$$E \rightarrow E * E$$

$$E \rightarrow (E)$$

$$E \rightarrow id.$$

(10 Marks)

OR

- 8 a. Define Instantaneous Description in Pushdown Automata. Construct an NPDA for the Language $L = \{WCW^R : W \in (a, b)^*\}$. (10 Marks)
- b. Consider the Grammar.

$$S \rightarrow L = R \mid R$$

$$L \rightarrow * R \mid id$$

$$R \rightarrow L$$

Verify the grammar is SLR (1) or not through the suitable parsing table.

(10 Marks)

CMRIT LIBRARY
RANGALORE - 560 037

Module-5

- 9 a. Define Turing Machine. Construct a Turing Machine to recognize the Language.

$$L = \{a^n b^n : n \geq 1\}$$

(10 Marks)

- b. Write the SDD for the grammar. Also construct the Annotated Parse tree for $5 * 6 + 7$;

$$S \rightarrow EN$$

$$E \rightarrow E + T$$

$$E \rightarrow E - T$$

$$E \rightarrow T$$

$$T \rightarrow T * F$$

$$T \rightarrow T / F$$

$$T \rightarrow F$$

$$F \rightarrow (E)$$

$$F \rightarrow digit$$

$$N \rightarrow ;$$

(10 Marks)

OR

- 10 a. Construct a Turing Machine to recognize the Language.

$L = \{0^n 1^n 2^n \mid n \geq 1\}$ and trace the string 0 0 1 1 2 2.

(12 Marks)

- b. For the Grammar construct the SDD and the annotated parse tree for the string $3 * 5 * 4$ and show the Evaluation order.

$T \rightarrow FT'$

$T' \rightarrow * FT'$

$T' \rightarrow \epsilon$

$F \rightarrow \text{digit.}$
